EDUCATION

University of Maryland, Baltimore County
Bachelor of Science, Computer Science (GPA: 3.2)

Aug 2022 - Dec 2026
Baltimore, MD

EXPERIENCE

Financial Industry Regulatory Authority (FINRA)

Jun 2025 - Aug 2025

Software Engineer Intern

Rockville, MD

- Integrated AI-powered NLP chatbot (Moveworks) with endpoint monitoring system using Python and REST APIs, enabling autonomous ticket triage and resolution for 392 incidents monthly across 4,000+ devices
- Built analytics dashboards consuming JSON data from AWS DynamoDB for real-time monitoring, surfacing recurring issues and enabling data-driven decisions for stakeholders
- Developed Selenium-based automated testing framework with comprehensive validation logic, ensuring system reliability across phased production rollout
- Won 1st place at FINRA Createathon by rapidly building compliance monitoring POC within 48-hour deadline, demonstrating ability to ship iteratively under ambiguity

American University

Jan 2024 - Sep 2024

Machine Learning Undergraduate Researcher

Washington, DC

- Developed ML model using Python and Neural Networks achieving 97% accuracy in predicting investment neighborhoods, supporting 40-50 daily users evaluating \$10M+ in investment opportunities
- Deployed production REST API using Spring Boot (Java) and PostgreSQL, with system remaining in active use 12+ months post-delivery through regular feature updates
- Optimized data processing pipeline achieving 40% performance improvement through algorithmic optimization and vectorized NumPy operations

PROJECTS

Retriever Study

Jan 2025 - Present

- Built AI-powered platform serving 150 daily active users by integrating Google Gemini LLM API, implementing few-shot prompting and structured output parsing to transform questionnaire inputs into semantic matching recommendations
- Designed multi-step agentic workflow: intake agent validates and structures user data, matching agent generates candidate recommendations, and ranking agent scores and filters final results
- Built prompt evaluation framework using test cases with expected outputs, tracking match quality metrics and iterating on prompts based on user feedback to improve recommendation accuracy
- Architected async Python FastAPI backend with React TypeScript frontend, deploying on AWS (EC2, RDS, S3) with PostgreSQL database

RetrieverEats

Oct 2025 - Present

- Engineered full-stack platform using Node.js and .NET 8 Web API (C#) with React frontend, coordinating order workflows between 50+ users, 8+ restaurants, and 7+ drivers
- Implemented Redis caching layer reducing database queries by 40% and optimized SQL queries improving response times from 180ms to 70ms (61% improvement)
- Deployed containerized application using Docker with CI/CD pipeline for automated testing and deployment

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, Java, C#, Go, SQL, HTML/CSS
- **AI/ML:** LLM APIs (Google Gemini, OpenAI), Prompt Engineering, Few-Shot Prompting, PyTorch, TensorFlow, Neural Networks
- **Frameworks:** React, Node.js, FastAPI, Flask, Spring Boot, .NET 8
- **Cloud & DevOps:** AWS (EC2, RDS, S3, DynamoDB), Docker, CI/CD, Git, GitHub Actions
- **Databases:** PostgreSQL, Redis, MongoDB, SQLite
- **Practices:** Agile/Scrum, REST APIs, OAuth 2.0, Unit Testing, Evaluation Frameworks
